

Cluster structure and trajectory are robust to doublet exclusion: cluster 17 is not doublet-enriched

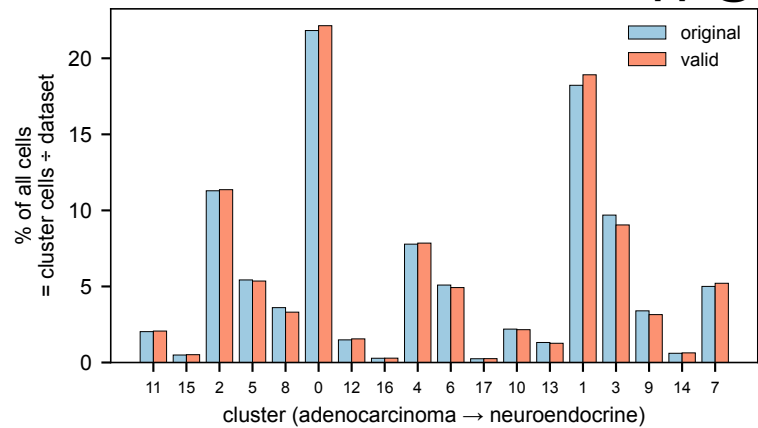

(A) Per-cluster doublet RATE — within-cluster fraction called doublet (cl17 outlined; * = enriched, BH<0.05)

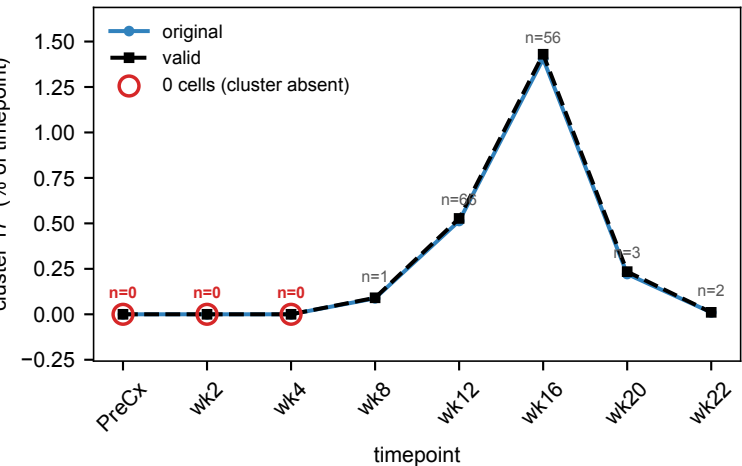

(B) Composition preserved $r=0.999$, $\cos=1.000$

(C) Cluster COMPOSITION (share of dataset) before vs after —max shift 0.69 pp @ cl1

(D) Cluster 17 trajectory preserved

(E) doublet % (cluster x timepoint)
